CALC 20 Version 2- getting ready for calculus

1. Solve for x: $-4 + ax = 9x + 7$ [280]

2. Solve $4x^3 + 10x^2 - 14x = 0$ [281]

3. Factor and solve $5e^{2x} - 13e^x - 6 = 0$ [282]

4. Make a rough sketch of each of the following on the same graph: [283]

$y = e^x$ and $y = \ln x$ and $y = x$

5. Make a rough sketch of each of the following –LABEL both Axes: [284]

$y = \cos x$ and $y = \sec x$

6. Make a rough sketch of each of the following – LABEL both of the Axes: [285]

$y = \sin x$ and $y = \tan x$

7. What is the equation for a circle and that equation solved for y=? [286]

8. Solve for y by knowing what multiplying by negative one really does to subtract:
 $-2m = r^2 - \ln 5$ [287]

9. Exponentiate from base 3 to solve for y:
 $\log_3 y = 2x + \log_3 4$ [288]

10. Exponentiate from base e to solve for y:
 $\ln|y + 4| = 2x^2 + e^5$ [289]

11. Take the log of both sides to solve for x:
 $8^x = 14$ [290]

12. Make a detailed graph of one period of $y = \cos x$ to answer the following questions: [291]

$\cos \theta = 1$ and $\cos\{\frac{\pi}{2}\} =$ and $\cos \theta = 0$

13. Make a detailed graph of the following polynomial to answer the following:

$f(x) = (x + 7)^2(x - 6)^3(x + 1)$ [292]

solve $f(x) \leq 0$, answer in interval notation.

14. Use long division to see if $x = 3$ is a root of $f(x) = 5x^2 - 13x - 6$ [293]

15. Prove that this fn is even or odd:

$f(x) = x^3 + 8x$ [294]

16. Make a rough sketch of each of the following: [295]

$y = \frac{1}{x}$ and $y = \frac{1}{x^2}$ make one dashed.

17. Use long division to make $\frac{x-9}{x+2}$ into 1 plus a fraction [296]

18. Build an inverse of this function:

$y = \frac{3x}{x+7}$ [297]

19. Solve: $\frac{\frac{4}{2x} + 3}{\frac{1}{2x}} = 5$ [298]

20. If $f(x) = -x^2 - 2x + 4$, find and simplify $f(x+h)$ [299]
